Flylabs

Field: Public rescue services

Our location: Prague

About us:

Flylabs is a young startup from the Czech Republic that seeks a future where people are not put at risk. Our goal is to develop autonomous systems that can help and even replace rescuers to achieve a safer world where high risk labor belongs to the machines.

What we do:

We develop autonomous drones that can aid rescuers in events of large fires so they do not have to put their lives at risk. These systems also provide much larger mobility and therefore a quicker reaction time than conventional responses.

Our innovations:

Flylabs firefighter drone - A drone filled with a water supply that can reach dangerous places so the rescuers do not have to put their lives at risk and offer a quick response in an event of a fire.

Vision:

Our vision is a world where people do not put their lives at risk. A world where dangerous labor belong to the machines. A safer and advanced world.

Claim:

Eco drones for humanity

Motofut

Field: Motorcycles with AI

Our location: Maranello (Italy)

About us:

Motofut — Motors of Future — is a young startup from Maranello redefining motorcycle riding through AI, performance technology, and extreme-sport thinking. We are building intelligent solutions that help riders stay safer, faster, and more confident across changing weather, terrain, and road conditions.

What we do:

We have developed a motorcycle that:
-is resistant to extreme climates
-have spikes at its wheels
-has removable transparent protective canopy (from hard-coated polycarbonate)
-has control panel in holographic-style for easy control
-has your finger print as an opening key

Our innovations:

-adaptive wheel technology designed for multiple terrains and weather
-have a smart display with AI
-finger print as a key to the motorcycle
-a holographic-style control panel integrated into the motorcycle

Vision:

Our mision is to build a future where no climate, no weather, and no surface can stop the ride.

Claim:

"The future of riding starts here. Smarter bikes. Better rides."

Cool Core

Field: Electric cooling technology, smart drinkware, and portable cooling solutions

Our location: Frankfurt, Germany

About us:

CoolCore is a young startup from Frankfurt, Germany. We are developing modern electric cooling systems that make it easier to cool drinks and everyday products wherever people are.

What we do:

We design compact cooling technology that can be used in self-cooling drink bottles and potentially in other products such as lunch boxes, outdoor gear, sports equipment, and travel accessories. Our goal is to make cooling more portable, reusable, and convenient.

Our innovations:

Our main innovation is an electric cooling system that can cool drinks without ice, disposable cooling packs, or large refrigerators. The technology is designed to be compact, practical, and adaptable for different product categories.

Vision:

Our vision is to bring smart and sustainable cooling into everyday life. We want to create products that help people enjoy cold drinks and fresh products anytime and anywhere.

Claim:

CoolCore — Freshness on demand.

CoolCore

REUSABLE COOLING MODULE FOR YOUR BOTTLE

Cools with Phase Change Material (PCM)

INNOVATIVE COOLING TECHNOLOGY
The PCM keeps your drinks cold for longer – completely without electricity.

SUSTAINABLE & REUSABLE
Use it again and again and avoid single-use plastic bottles.

FLEXIBLE & COMPATIBLE
Fits in many standard bottles and is perfect for everyday use – wherever you go.

LONGER COLD
Ideal for on the go, at the gym, in the office or while traveling.

PCM (Phase Change Material) absorbs cold when frozen and slowly releases it into your drink to keep it cold for longer.

EASY TO USE

1 FREEZE THE MODULE

Place the cooling module in the freezer for at least 4 hours.

2 INSERT INTO BOTTLE

Put the cooled module into your bottle and enjoy.

3 DRINK STAYS COLD LONGER

The PCM absorbs warmth and keeps your drink cold and refreshing – completely without power.

NO BATTERY NO POWER | SUSTAINABLE & REUSABLE | PERFECT FOR ON THE GO | GOOD FOR YOU GOOD FOR THE PLANET

OCTOBOTICS

Field: collection and recycling of waste at sea

Our location: Italy, Naples

About us:
OCTOBOTICS is a startup from Naples that develops technologies to clean the sea in a way that is safe for marine life and water ecosystems. We want to show people the reality.

What we do:
We built a robot that:
collects trash in the sea
use the plastic to transform it into fuel to power itself (recycling)
we have a center where we show the reality of the ocean

Our innovations:
8 Arms that work fast and efficient
50L Room for trash
360 degree cameras and sensors

Vision:
Our vision is to get the oceans cleaner and keep the water ecosystems healthy.

Claim:
Octobots are saving the ocean and sea from plastic overflow.

Swift Drop

Field: modern post and delivery services

Our location: Milan, Italy

About us:

Swift Drop was created in 2023 by a small group of students in Milan. We conduct research and development on delivery drones for widespread public use. To this end, we are also developing software to ensure that the drones will be as easy as possible to operate in the future.

What we do:

We have developed programs that allow users to have their packages delivered by drone, which then carry out the delivery as autonomously as possible.

Our innovations:

– starting a pilot project in Milan in 2026
– creating an app for delivering packages
– creating the Swift Drop 1 as model for a drone

Vision:

We aspire to deliver packages in the most sufficient and fastest way by using drones.

BeachBotics

Field: Environmental technology / Robotics / Sustainability

Our location: Prague

About us:

We are a forward-thinking company focused on solving one of the biggest environmental challenges: beach pollution. By combining robotics, AI, and sustainable design, we create machines that can operate directly on sandy terrain and collect waste without harming wildlife. Our mission is to support cleaner ocean

What we do:

We design, build, and deploy autonomous robots that detect and collect waste directly from the sand. Using advanced sensors and smart navigation systems, our robots can identify different types of waste and operate efficiently even in challenging beach conditions. Our solutions are used by cities, resorts, and environmental organizations to maintain clean, safe, and attractive beaches. We also offer maintenance and customized deployment plans to ensure long-term performance and environmental impact.

Our innovations:

Our robots use advanced sensor technology and intelligent navigation to detect and collect waste efficiently without disturbing the natural environment. They are designed to operate on different types of sand and adapt to changing beach conditions, making them a reliable and sustainable solution.

Vision:

Our vision is to create a future where beaches around the world are clean, safe, and free from pollution through the use of smart and sustainable technology.

Our location: Copenhagen

About us:

Aqua Fade is a young start-up company focused on reducing plastic pollution in the oceans.We created an innovative water bottle that dissolves into salt and natural minerals after use leaving no harmful waste behind.
Our mission is to replace single-use plastic and create a cleaner future for our plan

What we do:

We develop products that:
Reduce plastic waste
Are safe for the environment
Encourage sustainable living

Our innovations:

Aqua Fade Bottle- a water bottle made from natural materials that dissolves after use
PureWave Technology: keeps the bottle stable while being used EcoTrack App- helps users track how much plastic they save

Vision:

Our vision is a world where packaging leaves no waste and oceans stay clean.

Claim:

“Drink water. Leave no waste.”

HYRO

Field: Robots and environment

Our location: Netherlands

About us:

We crated a robot that
. powered by compressed hydrogen
. designed to clean plastics and other trash from ocean
. has a solar panel for backup energy

What we do:

- We are creating robots that are powered by compressed with Hydrogen.These helps to clean the ocean in the world and helps managing a bettter future for next generations.
- They also have solar panels if any errors would occure.
- The will help to survive fishes and other sea creatures in the ocean that are right now struggling because oceans are full of waste.

Our innovations:

The robots are powered by hydrogen and that makes them unique. Its better for replacement of the battery quicker than recharging it with electricity that takes more time.

Vision:

Our vision is to make oceans clear again and improve situation for sea creatures.

Claim:

"We are trying to make the ocean ecosystem as it would be without humans."

LifeMetrics

Field:
Sustainable technologies & smart data

Our location:
Europe

About us:
LifeMetric is a young startup from Europe that develops a tool which combines advanced data analytics with sustainable energy solutions.

What we do:
We worked on a utility tool that
- analyzes your body health data including symptoms
- draws conclusions depending on your health status and gives further instructions

Our innovations:
- LifeMetric ONE = a small, sustainably produced tool for measuring full body health
- LifeMetric App = a mobile App that connects to the tool, to show your real life d.

Vision:
Our vision is to give everyone the opportunity to check your health at any time and any place

Claim:
Measure life precisely. Always.

Food LAB

Field:
drone-based food delivery

Our location:
Prague

About us:
Food Lab is an innovative project that delivers desserts using drones. By flying over traffic, we provide faster delivery while keeping desserts fresh and high quality. Our electric drone system offers a modern and better alternative to traditional delivery.

What we do:
Food Lab develops and operates intelligent drone systems specifically adapted for dessert delivery. These drones transport desserts directly from preparation facilities to customers, using optimized flight paths that ensure reliability and safety.

Our innovations:
Food Lab uses electric drones with temperature control and precise navigation to deliver desserts quickly and safely. Optimized flight routes and real-time tracking ensure fast, reliable, and fresh delivery.

Vision:
Our vision is to deliver fresh desserts to customers in just 5 to 10 minutes.

Claim:
Sweetness delivered from the clouds

Laser ZOO

Field:
Drones that make moving animals using lasers

Our location:
New York

About us:
Laser ZOO is a young startup from New York that combines modern drones with lasers. Our goal is to replace dangerous and loud fireworks that damages environment for most of the animals.

What we do:
We care deeply about the lives of animals. Animals in many zoos and circuses live in very poor conditions.

We want to do things differently and produce animals using lasers so that we don't have to remove any animals from its vital habitat.

Our innovations:
Drones - Its new designe, they are eco freindly and are produced from reuseable materials.

Lasers - They are colourful and can do lots of special effects.

Vision:
We want to make people realize that if they use our drones they dont have to use fireworks

Claim:
„Letting the sky light up with animals"

Starket

Field: IT, technologies

Our location: Munich, Germany

About us:

We are a forward-thinking start-up driven by the vision of making futuristic experiences part of everyday life. Our mission is to make highly innovative technologies accessible to people everywhere – in a simple, mobile, high-quality and effective way.

What we do:

We design and deliver next-generation consumer technology that transforms how people interact with digital content. Our flagship product, Startek, is a pocket-sized hologram projector that allows users to experience immersive visuals anytime, anywhere. Whether for entertainment, presentations, or creative expression, we make the future closer than ever before and we believe that holographic technology will redefine communication, entertainment, and creativity.

Our innovations:

At the core of our work is innovation without compromise. Startek combines advanced holographic projection technology with portability and ease of use, creating a completely new way to display and share content. We focus on pushing boundaries, without holding back.

Vision:

Our vision is to become a global leader in portable holographic solutions and to shape a world where digital experiences seamlessly blend into reality.

Claim:

Starket, just put it in your pocket!
